

Collections Recovery — Quick Dashboard

Analysis of the cleaned collections data. August is partial, so the main trend uses January–July.

Feb → Mar cash

+11.11%

Recovery rate change

+1.38%

Jan → Jul cash

+0.01%

Calls with borrower mismatch

98.46%

Main takeaway: The 11% number is real for Feb→Mar cash volume, but it does not show an 11% improvement in overall recovery performance.

Cash recovered (₹M)

Month	Cash recovered (₹M)
01	187
02	170
03	189
04	175
05	184
06	176
07	187

Values are cleaned successful-payment cash. August is excluded from this chart because it is incomplete.

What changed?

- Feb cash: ₹170.3M
- Mar cash: ₹189.2M
- Recovered accounts: 2,173 → 2,419
- Recovery/account rate: 42.11% → 42.69%
- Recovery per targeted account: ₹33,000 → ₹33,390

Monthly recovery view					
Month	Cash recovered	Recovered accounts	Targeted accounts	Recovery rate	Cash MoM
2026-01	₹187.2M	2,374	5,732	41.42%	
2026-02	₹170.3M	2,173	5,160	42.11%	-9.05%
2026-03	₹189.2M	2,419	5,666	42.69%	+11.11%
2026-04	₹175.2M	2,304	5,585	41.25%	-7.38%
2026-05	₹184.3M	2,344	5,800	40.41%	+5.20%
2026-06	₹175.9M	2,286	5,535	41.30%	-4.60%
2026-07	₹187.2M	2,335	5,666	41.21%	+6.48%

Data quality flags

- **98.46%** of calls have borrower IDs that disagree with the account borrower ID.
- **92.85%** of PROMISE_BROKEN targets do not have a prior broken PTP event.
- About **66.7%** of calls have a timezone mismatch with the account.
- Borrower-level analysis is therefore treated as unreliable.

₹10 Cr recommendation

Better borrower targeting, but use a controlled pilot first.

There is a clear targeting-quality problem, while the data does not give a strong causal case for more agents, AI voice, digital, field or telephony.

A full ₹10 Cr rollout is not justified from this observational dataset alone. Test the uplift first and add cost data.
